TECH GROUP OF COMPANIES

AL-MADAD SECURE RESORT

Introduction:

Tech Group of Companies established in 1982 is a group of companies led by highly qualified Technopreneurs.

Pakistan's Economy is driven by 2% of its population:

Pakistan is basically an agro-based economy and earns its foreign exchange reserves mainly from the export of Agro-based products and remittances from the Pakistani's working abroad. The entire wealth of Pakistan comes from 2% of its population while remaining 98 % have no means to contribute to the economic growth. With 80% of the population under 20 years of age Pakistan's economy can grow at a very fast pace provided that we enable our young population via Education and Agro-Entrepreneurship for Sustainable Poverty Alleviation.

Karachi City the Industrial Economic Hub of Pakistan:

Karachi is a famous port of the world and hub of Air traffic in the sub-continent with a population of 20 million educated, skilled and non-skilled professionals. The largest industrial cum business city, contributes 65% of the governmental revenue. Possesses beautiful beach and virgin suburb land, there are many natural and man-made lakes in the close vicinity of the city.

Unfortunately; there is no any developed recreational site in the surroundings, which leads to continuous tension build ups and is a cause of different social crimes in the citizens in general and in the youth in particular.

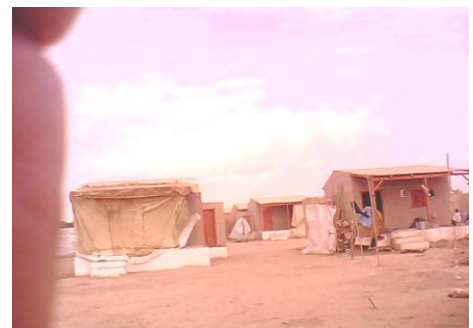

AL-Madad Foundation:

Founded in 1981 as a student's social welfare organization {AL-MADAD TANZEEM (Urdu word for organization to help)} by Syed Khurshed Shah that is recently converted into AL-MADAD FOUNDATION a not for profit wing of the group.

Almadad Foundation has contributed its support and relief services during several disasters, earthquakes and Floods in Pakistan and abroad; Following are few glimpses of the projects in which Tech Group made its contribution;

IDPs Rehabilitation Village Thatta

Single Bedroom Homes for IDPs Thatta

IDPs Village Construction SAJAWAL

Drinking Water Plant Makli

Drinking Water Plant Balakot Earthquake

Drinking Water Plant Bara khuo

2010 Flood Relief Camp Badin

Mobile Drinking Water Plant IRAQ

Pakistan Navy Flood Relief Camp

Sold to Flood Relief Chiapas Mexico

The Challenge:

Poverty remains a serious concern in Pakistan, where the per capita gross national income (GNI) is US\$520. According to the latest figures, as measured by Pakistan's poverty line, 32.6 percent of the population is composed of poor hard-working Farmers.

Government and social organizations have never prioritized to develop recreational facilities for the middle class, therefore either they have restricted themselves to indoor activities or seldom visit farmhouses spread in the suburbs of Karachi which is a highly expensive form of entertainment not affordable more than once a year. That leads to continuous mount ups of stress, psychological ailments and physical weakness. It is also a cause of heightened street crimes in order to earn easy money.

As a matter of fact 2,000,000,000(2 billion) peoples do not have access to clean water in the world; similarly a sizeable population of Pakistan do not have access to clean drinking water. Subsurface water is grossly contaminated with chemical contaminants like Arsenic, Fluoride and pesticide/herbicides, while in cities water is badly contaminated with microbiological contaminants and cause spread of contagious disease.

Pakistan is quite rich in natural resources and fifth largest Milk and Meat producing country in the world, but with the introduction of injection "Oxytocin" and use of Urea in feed, the milk is grossly contaminated, while large quantity of milk is wasted due to lack of processing facilities.

The Project:

To help poor families earn sustainable income, Water Security Company Private Limited (WSCP, www.watseco.com) in collaboration with Reliable Energy Savings Inc. (RESI, <http://www.reliable-savings.com/>) is engaged in developing "Total Quality Life for All" initiative to assure Sustainable Total Quality Life of Meat & Milk Farmers and Middle Class Families of Pakistan. The project engages Academic & Financial Institutions, Farmers, Entrepreneurs and Professionals as local associates to provide Affordable SAFE Food & Beverages and world class affordable recreational facilities in communities.

The Al-Madad SECURE™ Cattle Farmer Economic Welfare Program assures Human & Cattle Health via State of the Art Waste Management and All Season Green (ASG) Feed Program. The project will consists of Six Large Domes for raring Cattles, Storage etc., with appropriate number of hydroponic Fodder growing cabins, Bio Gas Plant and Electric Generation Facility.

Barley Grass Growing Hydroponic Cabin

Barley Grass Growing Hydroponic Cabin

The Al-Madad SECURE™ Resort Program assures world class Recreational Facility in close vicinity of Karachi having 72 single and double bedroom domes coupled with one restaurant and Indoor games cum gymnasium Domes and a 12 holes Golf course.

Al-Madad Foundation will also construct an Expo- Dome coupled with a world class conference facility, where we can hold Conferences and show case green products and technologies, Visitors will enjoy residential, Recreational and Business in Security Bound area and need not to waste time travelling between Hotels and Expo Halls.

All facilities are planned on a 52 acres land parcel in the close surrounding of Halegi Lake 95 kilometers from Karachi, bearing 24°48' 50.00"N 67°45'13.77"E geo-coordinates. Few Glimpses:

The Pecasa:

Pecasa Dome technology has been selected to build the building structure for the project as a Dome is the safest shape on earth. Tested and proven over thousands of years. It has withstood bombs and bullets, hurricanes winds, tornadoes and earthquakes. It is a pleasant, comfortable natural shape of nature.

Community Projects and Introduction of Technology to Builders and Governmental Institutions:

Al-Madad is looking forward to complete the project by or before June 2013, hold an expo on 14th of August the National Day of Pakistan and would like to get it inaugurated by the President of Pakistan. This would be a great opportunity to introduce the technology to all stake holders in Pakistani and sub-continent market. Tech group already have a client willing to construct 5000 plus low cost houses(a suburb Development agency that owns 50,000 acres of land in suburb of Karachi).
